Education

- **Stony Brook University** — New York, U.S.A.
  Master of Science in Computer Science; GPA: 3.93 — *2019 – 2021*
  - **Courses**: Analysis of Algorithms, Data Science, Natural Language Processing
  - **Teaching Assistant**: CSE 214 - Data Structures
- **University of Mumbai** — Mumbai, India
  Bachelor of Engineering in Information Technology; First Class with Distinction (72.9%) — *2011 – 2015*
  - **Relevant Courses**: Data Structures and Algorithms, Operating Systems, Discrete Mathematics

Experience

- **J.P. Morgan Chase & Co.** — Mumbai, India
  Senior Application Developer — *Feb 2018 – Aug 2019*
  - **Data Access Control System (DACS) Authentication**: Ensuring secure access to live prices from Bloomberg. Instrumental in helping the firm avoid any audit issues and reduced subscription costs per trader by 50%.
  - **Trader Analytics**: Implemented functionalities such as absolute and percent variation, market share and standard deviation of stock prices based on historic data to assist traders in making better decisions.
  - **Memory Optimization**: Performance tuning of heap consumption and G1 Garbage Collection through careful analysis of humongous allocations resulting in 80% fewer memory related issues.
  - **Real-Time Pricing**: Developed a component which approximates market risk in real-time from live underlying prices; and publishes the results for consumption. It helped retire a legacy system thus saving the firm ∼$250k.

  Application Developer — *July 2015 – Jan 2018*
  - **Risk Management System**: Worked extensively on the core app used by traders for visualizing and hedging risk; 1. Optimized the Positions feed using LMax Disruptor, a low latency queue library for upto 20% faster processing. 2. Process startup time improvement by 50% through the use of concurrency and Spring annotations.
  - **Market Data Source**: Framework for validating the functionality of the critical market data publisher and reporting results using Java MXBeans and Apache POI. Reduced the manual testing effort by 90%.
  - **Quick-Deploy**: Streamlined the deployment, startup and health check of application modules in production to bring down the release time by 66%.
  - **MongoDB High availability**: Mechanism to switch from replica set to standalone configuration on the fly in case of a data center failure. Ensured business continuity during critical failures and reduced operational risk.

Technical Skills

- **Languages**: Java, Python, Unix Shell Scripting, SQL
- **Frameworks**: Spring, Spring-Boot, Swagger, Apache POI, Java MBeans, JMS, Pandas, JBehave
- **CI Tools**: Gradle, Team City, Git, Bitbucket, Ant, Jenkins, YourKit
- **Databases**: Sybase ASE, MongoDB, MySQL

Projects

- **Chess Player Ratings**: A regression model to predict the Elo rating of a player from the moves sequence data.
- **Toxic Online Comments**: Deep learning model for identifying Toxicity in Wikipedia comments.
- **Email Template Generator**: Built on the handlebars framework, creates templates to send out reactive email alerts.
- **Pratham NGO**: A system to keep track of the underprivileged students supported by the NGO. Migrated data from Salesforce to Azure SQL using Pentaho Kettle and developed a Java utility for reporting faulty data.
- **Reliable UDP**: Server-Client Exchange with Checksum validation and re-transmission in case of corrupt data.
- **Physual(*Capstone*)**: Text to scene system to visualize Mechanics problems using NLP, Java 3D and Blender Models.
- **Machine Learning/NLP**: 'Inverted Index Builder', 'News Article Classifier', 'Products Review Sentiment Analyser', 'Songs Recommender System' and 'Similar Document Clustering System' based on tf-idf and page rank algorithms.
